Chip, there has been silence because I am going through the revised version and adding some language and making any of the changes I had that survived your revision. I am going as quickly as I can.

I also got a response from Bruce that by adding more specific discussion of the silt unit, and the goal to do FE to cleanup the UGS as well as reduce concentrations in the silt to be protective of the UGS, and to require Reynolds to do an addendum to the sitewide monitoring plan that would lay out performance criteria for the FE and decision points for determining whether cleanup goals have been achieved would be sufficient for concurrence.
